RDL Introduces Decora® High Efficiency Audio Power Amplifier

June 10, 2014 - RDL is pleased to introduce the D-PA3 3.5 Watt Audio Power Amplifier. The D-PA3 is a high efficiency 3.5 Watt audio power amplifier with two line inputs and an amplified output to drive a 4 or 8 Ohm speaker. The line level input on the rear panel accepts balanced or unbalanced line-level signals. The amplifier also features a stereo Mini-Jack input on the front panel that is designed to receive standard -10 dBV consumer level signals from sources such as a computer or personal media player. The left and right audio signals received on the Mini-Jack are summed to mono and amplified. When a source is connected to the front-panel Mini-Jack, the rear-panel input is switched off. The amplified output level is controlled by a front-panel volume control.

The D-PA3 is ideal for a wide variety of applications including: an outdoor patio where it is desired to override the background music with a local music source such as a smart phone, tablet or MP3 player; a private meeting room where there is background music playing, but the hosts would like to override and provide their own background music for the meeting/event; an office where there is background music that a worker wants to bypass to listen to his/her personal player or dictation recorder; anywhere it is desired to provide a local input to override a BGM source and play on a localized speaker.

Amplification is provided by a high-efficiency Class D power stage with audio filtering tailored for crisp, pleasant audio clarity. The high-efficiency Class D output stage produces negligible heat for all levels of expected voice or music modulation.

The versatile Decora format and all-metal design allow the D-PA3 to be installed into a variety of environments and applications.

The D-PA3 is available in 3 colors; white (D-PA3), black (DB-PA3) or stainless steel (DS-PA3).
