

Description:

A 70 V audio signal is being distributed to multiple zones in a facility. The RDL TX-70A provides for the expansion of the existing 70 V system by converting the 70 V signal to an unbalanced line level signal. The unbalanced audio signal feeds the FP-PA20A 20 Watt 70 V Audio Power Amplifier, which powers the speakers in the additional zone. The TX-70A is equipped with a level trimmer for achieving optimal signal level.
