

MULTIPLE CHIMES IDENTIFY SPECIFIC ENTRANCES

RDL FP-CH8 Provides Unique Annunciator For Each Door

Description:

The RDL FP-CH8 Chime Generator is the solution when it is necessary to associate a unique sound with specific events. In this example, four of the eight available chime tones are used. A particular chime identifies which doorbell button is pushed.

The push button associated with each door triggers a specific chime in the FP-CH8. The module's line level audio output is amplified by an RDL ST-PA2 audio amplifier so the chime is heard in the monitoring room.

The FP-CH8 output could feed audio to a facility-wide BGM/paging system. A setting on the FP-CH8 allows the chimes to duck or to be mixed with background music.

The eight chime tones can be sampled by clicking "Hear me in action" on the FP-CH8 product description page on the RDL web site.

Parts List	
Product	QTY
FP-CH8	1
RU-SP1	1
ST-PA2	1
WDG1	1
