

CONSISTENT CHURCH MICROPHONE LEVELS

Enhanced intelligibility with untrained presenters

Description:

The RDL EZ-MCP1 Microphone Compressor is installed in-line between the church pulpit/lectern-mounted microphone and the house mixer. The EZ-MCP1 automatically adjusts the volume for best intelligibility for a wide range of presenters' speaking styles. Phantom voltage (IEC Standard 24 Volt) is provided by the EZ-MCP1 when it senses phantom voltage from the house mixer.

The EZ-MCP1 provides transparent audio level adjustment and compression over a 30 dB range. Its audio performance is excellent while providing a user interface that accommodates the non-professional. It insures freedom from clipping and overload distortion, providing consistent audio levels throughout a presentation and/or from one presenter/speaker to the next.
