

CLASSROOM SYSTEM WITH PRIORITIZED PAGING

Full-Featured "Green" Mixer Amp Integrates Two Paging Priorities

Description:

Classroom mic, line and computer audio sources are connected to the HD-MA35UA Mixer Amplifier through RDL wall plates. A school-wide paging feed connects directly to the mixer amplifier paging input. The paging source may be either mic or line level. VOX switching eliminates the need for push-to-talk contacts. The HD-MA35UA setup allows flexibility in muting or ducking the other input channels during paging.

An ST-VP2 Automatic Ducking Module adds an additional priority paging source. The ST-VP2 uses the HD-MA35UA effects loop to cause the highest priority page message to duck all other amplifier inputs to provide the emergency page. The ST-VP2 is powered by the auxiliary module 24 Vdc power output from the HD-MA35UA.

The HD-MA35UA powers up when audio is detected. When the system is inactive (no audio in use) it enters the sleep mode, consuming less than one watt for optimum energy conservation. The HD-MA35UA returns to active mode (turns on) automatically when an audio input becomes present.

*RDL products are NOT intended for use in life support appliances, devices, or systems.
