

# INDIVIDUAL PERSONAL AUDIO MONITORS

Headphone Distribution in Broadcast and Voice-Over Studios

**SYSTEMS SOLUTIONS**

AN-2164

## Description:

RDL Format-A series twisted pair products simplify the distribution of stereo audio to multiple headphone monitors in the broadcast studio. A single (standard 4 pair) UTP cable run allows the TX-TPS3A to feed stereo audio and power to the D-HA1A Headphone Amplifiers. Up to six D-HA1A may be connected to one TX-TPS3A Audio Sender.

In this system the Headphone Amplifiers are housed in DC-1G Desktop Chassis'. The all-steel DC-1G and CP-1 Cover Plate sport a durable powder-coated finish for a handsome appearance over many years of service.
