

CUSTOMERS PLAY PERSONAL AUDIO IN PUBLIC HOUSE

BGM Audio System with Wall-Mounted Customer Input for Personal Audio Player

SYSTEMS SOLUTIONS AN-2182

Description:

This establishment normally provides patrons with background music from a consumer CD player. Two inputs of the ST-MX3 Line Level Mixer are used to combine the left and right channels of the CD player's unbalanced stereo output. On special occasions, customers are encouraged to play music from their personal media players through the house system using a wall-mounted D-CIJ3 Consumer Input Jack Panel. The D-CIJ3 combines the customer's stereo source to a balanced mono signal that feeds the third balanced input of the mixer module. The local CD player is simply turned off (or paused) when the personal media player is in use.
