

AUTOMATIC PROJECTOR SCREEN CONTROL

Projector On/Off Status Converted to Up/Down Pulses to Control Motorized Projection Screen

Description:

Used with a projector that provides a contact closure or logic-level voltage when powered on, the ST-LCR3 Logic Controlled Relay provides a momentary contact closure to automatically lower the motorized projection screen. When the projector is powered off, the ST-LCR3 provides a separate momentary contact closure to raise the screen. Additional ST-LCR series modules may be triggered by the ST-LCR3 SLAVE outputs to provide additional contact closures to control window shades and lighting presets for complete single-button control of an AV system.
