

### Description:

One Format-A receiver is used to provide two mono line-level signals to a local mixer in the equipment rack. Bluetooth L + R summed mono audio is sent to the receiver on pair B. Pair C is used to receive line-level audio from the Format-A microphone preamplifier mounted in the room. Audio is connected from the Format-A senders through CATx cable with standard RJ45 connectors. The use of Format-A provides flexibility in the location of the senders, simple connection using CATx cable and the economy of a single receiver and power supply.
